**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 5-9 are vague and indefinite because the recitation of a feed cylinder and an impression cylinder is unclear how these two cylinders are related to the at least one roller as recited in independent claim 1. Is the one roller one of the two later recited cylinders or else?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Munker(5,271,323). The patent to Munker teaches the detailed structure of a printing machine as broadly recited including an impression cylinder 6 having first and second grippers 14 and 16 each of which is assigned with spring elements to press the grippers in a closed position, and a cam disk 34 for disposing the grippers 14 and 16 alternately in their respective open and closed positions in a cyclic movement of the impression cylinder. See Figs. 1-5 in Munker for details. With respect to claim 4, the recited other roller reads on a second impression cylinder 11 in Munker. Regarding claim 10, the recited pregripper reads on the gripper on cylinder 4 in Munker.

Art Unit: 2854

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Munker in view of Schaede(5,839,366). The feed cylinder 4 of Munker uses a gripper to receive a sheet from a sheet supply and to transfer the sheet to the impression cylinder 6. However, the detailed structure of the mechanism for actuating the gripper is not shown. Schaede teaches in a printing machine the conventionality of using feed cylinders 3 and 4 each equipped with sheet grippers structured the same way as recited. See Figs. 1-11 in Schaede for example. In view of the teaching of Schaede, it would have been obvious to those having ordinary skill in the art to provide the feed cylinder of Munker with the type of sheet grippers and associated actuating mechanism so as to facilitate the synchronized operation of the feed cylinder grippers with the grippers of the impression cylinder. Claims 6-9 are purely functional and believed to read on the functionality of the printing machines of the applied prior art references.
